R POBERTS T.M., AN Q., CHEN L.B.;

R PERSENCE Of an SH2 domain in the actin-binding protein tensin.";

U. SCIENCE 252:712-715(1991).

C -1- FUNCTION: MAY BE INVOLVED IN CELL MIGRATION, CARTILAGE DEVELOPMENT

AND IN LINKING SIGNAL TRANSDUCTION PATHWAYS TO THE CYTOSKELETON.

BINDS TO ACTINS AND PHOSPHORYLATED PROTEINS IN SRC-TRANSFORMED

CELLS. MAY BIND ACTIN WITH CAPPING AND BUNDLING PROPERTIES:

C -1- SUBCELLULAR LOCATION: LOCALIZES TO ADHERENS JUNCTIONS.

C -1- TISSUE SPECIFICITY: HEAPT, GIZZARD, LUNG AND SKELETAL MUSCLE.

C -1- PTM: TYROSINE-PHOSPHORYLATED.

C -1- SIMILARITY: CONTAINS A TENSIN DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright.                                                   PROC. NATL. ACAD. SCI. U.S.A. 84:2233-2237(1987).

- I- FUNCTION: TRANSPORT OF PHOSPHORYLANDED LINSOSOMAL ENZYMES FROM
THE GOLGI COMPLEX AND THE CELL. SURFACE TO LINSOSOMES. LINSOSOMAL
ENZYMES BEARING PHOSPHOMANNOSYL RESIDUES BIND SPECIFICALLY TO
MANNOSE-6-PHOSPHATE RECEPTORS IN THE GOLGI APPARATUS AND THE
RESULTING RECEPTOR-LIGAND COMPLEX IS TRANSPORTED TO AN ACIDIC
PRELYOSOMAL COMPARTMENT WHERE THE LOW PH MEDIATES THE DISSOCIATION
OF THE COMPLEX. THIS RECEPTOR ALSO BINDS INSULIN GROWTH FACTOR II.

-! SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN. LISSOSOMAL.

-! DOMAIN: CONTAINS 15 REPEATING UNITS OF APPROXIMATIVELY 147 AA. THE
MOST HIGHLY CONSERVED REGION WITHIN THE REPEAT CONSISTS OF A

STRETCH OF 13 AA THAT CONTAINS CYSTEINES AT BOTH ENDS.
                              'Cloning of the bovine 215-kDa cation-independent mannose 6-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    POTENTIAL. . Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 30.076; Variance 50.517; scale 0.595 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-! FUNCTION: EZ REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.

-! FUNCTION: EZ REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.

IT BINDS TO THE EZRE RESPONSE ELEMENT (5'-ACCNNNNNGGT-3') PRESENT IN MULTIPLE COPIES IN THE REGULATORY REGION. IT CAN EITHER ACTIVATE OR REPRESS TRANSCRIPTION DEPRINING OF EZRE'S POSITION WITH REGARDS TO PROWITER ELEMENTS. REPRESSION OCCURS BY STERICALLY HINDERING THE ASSENBLY OF THE TRANSCRIPTION INITIATION COMPLEX. THE E1-EZ COMPLEX BINDS TO THE ORIGIN OF DNA HUMAN PAPILLOMAVIRUS TYPE 63. VIRUSES; DSDNA VIRUSES, NO RNA STAGE; PAPOVAVIRIDAE; PAPILLOMAVIRUS. SUBCELLULAR LOCATION: NUCLEAR. SUBUNIT: BINDS DNA AS A DIMER. 01-ocr'1994 (REL. 30, CREATED) 01-ocr'1994 (REL. 30, LAST SEQUENCE UPDATE) 15-UUL-1998 (REL. 36, LAST ANNOTATION UPDATE) REGULATORY PROTEIN E2. 398 AA PRT; STANDARD; SEQUENCE FROM N.A. "Primer-directed sequencing of human papillomavirus types.";

CURR. TOP. MICROBIOL. IMMUNOL. 186:13-31(1994).

-!- FUNCTION: E2 REGULATES VIRAL TRANSCRIPTION AND DNA REPLICATION.

IT BINDS TO THE E2RE RESPONSE ELEMENT (5'-ACCNNNNNGGT-3') PRESEN

IN MULTIPLE COPIES IN THE REGULATORY REGION. IT CAN EITHER

ACTIVATE OR REPRESS TRANSCRIPTION DEPENDING OF E2RE'S POSITION

WITH REGARDS TO PROXIMAL PROMOTER ELEMENTS. REPRESSION OCCURS

BY STERICALLY HINDERING THE ASSEMBLY OF THE TRANSCRIPTION

INITIATION COMPLEX. THE E1-E2 COMPLEX BINDS TO THE ORIGIN OF DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

antagonists, in therapy, to detect Ab and to isolate cognate receptors. Oligonucleotides based on H35 cDNA can be used to detect the hypocretin gene or its RNA transcript, and as antisense agents for inhibiting gene expression. H35 cDNA can also be used for recombinant protein production. The Ab can be used to detect or quantify hypocretin proteins and as a therapeutic inhibitor.

                                                                                                                                                                                                                                                                                                Refinoid X receptor (RXR) interacting protein (RIP) - useful to medulate or mediate RXR function, anti-RIP antibodies can be used to determine RIP subcellular distribution patterns

Claim 2: Page 48-50; 90pp; English.

Mouse retinoid X receptor (RXR) interacting protein RIP110 (R99737) is a candidate transcriptional co-activator. It was identified using an in vivo interaction trap system for the isolation of proteins that physically interact with RXRs, esp. with the ligand binding domain of human RXR alpha. Recombinant RIP110 can be obtd. using a cDNA clone (731930) obtd. from a mouse liver library. RIPS (see also R99735-35 and R99738-39) can be used to modulate or mediate RXR function, and may be used therapeutically or to raise antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; Page 77-84; 110pp; English.
Saccharomyces cerevisiae DKD5D, which is sensitive to aureobasidin, was mutagenized with EMS and genomic libraries of 2 resistant strains were prepared. Resistant gene scaurlR (Q75954) was isolated from 1 library, and resistant gene scaurlR (Q75956) from the other. A DNA fragment of scaurl was used as a probe to isolate a sensitive gene, scaurlS (Q75955), from the sensitive strain. A TB52A mutation leading to a F158Y conversion gave rise to the resistance of scaurlR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

The sequences given in W21731-32 represent fusion proteins which contain NuMA (nuclear mitticis apparatus). The fusion proteins were used in the identification of NuMA interecting proteins (NIP's) (see also W21729-30).

W21729-30). Compounds which interfere with the interaction of NuMA with a known NIP are used to modulate cell division and/or proliferation. Ab, raised conventionally using NIP-1 or -2 as immunogen, are used to detect NIP (or their complexes) and to block their activity for diagnostic or therapeutic use, e.g. to detect defective NuMA or NIP which may be markers for aberrant (including malignant) cell growth (which can also be detected by nucleic acid sequencing). Also where malignancy is related to defects in NUMA or NIP, it can be treated by administration of the appropriate functional protein.
                                                                                               01-OCT-1997 (first entry)
02AL4/HA/NuMA fusion protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 iymphotoxin, useful as antinflammatory agent, tumour growth inhibitor. T-cell inhibitor or activator.
Claim 1; Page 60; 75pp; English.
A protein, designated p33, is found on the surface of several types of lymphocyte cells, including OKT3-stimulated primary T-cells, antigen-specific IL-2 dependent CTL clones, and a PMA-stimulated human T-cell hybridoma, IL-23.D7. It forms a novel complex with lymphotoxin (LT). The N-terminal of the p33 protein contains the sequence represented in R20234 or R20235. The sequence at the 6th cycle appeared to be a mixt. of both G and L indicating possible polymorphism. The p33 protein may have one of these sequences or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Claim 2, Fig 2; 35pp; English.

The HFGAN72 receptor protein contains two ligands whose antagonists can be used for treating obesity, diabetes, anorexia nervosa, bulnina, cachexia, chronic renal failure, remaind lasease, congestive heart failure, impaired glucose tolerance and sexual dysfunction. The agonist is useful for treating ancrevisa, bulinia and cachexia. The HFGAN72 receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral infections, particularly infections caused by HIV-1 or HIV-2, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, Parkinson's disease, both acute and congestive heart failure, hypotension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allergies, benign pectoris, myocardial infarction, ulcers, asthma, allergies, benign concestic hypertrophy, chronic renal failure, renal disease, impaired glucose tolerance, sexual dysfunction and psychotic and neurological disorders including anxiety, schizophrenia, manic depression, delirium, dementia, severe mental retardation and dyskinesias such as Huntington's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glial cell line-derived neurotrophic factor receptor gamma 1.

The agonist is useful for treating anorexia nervosa, bulimia and cachexia. The HFGAN72 receptor ligand is useful for treating e.g. bacterial, fungal, protozoan and viral cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, pain, cancers, anorexia nervosa, bulimia, cachexia, obesity, diabetes, asthma, proteinsion, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, ulcers, asthma, allergies, benign prostatic hypertrophy, chronic renal failure, renal disease, impaired allocates tolerance, sexual dysfunction and psychotic and neurological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HFGAN72 receptor; eating disorders; renal disease; heart failure;

Claim 2: Page 85-86; 113pp; English.

This amino acid sequence comprises human Ret ligand (RetL) RetL3, Caduced from acid sequence comprises human RetL1, human RetL2 and and spinal cord libraries. Rat and human RetL1, human RetL2 and mouse RetL3 sequences (see W37457-62) are also claimed. Human RetL1 is 34.3% identical to human RetL1, 34.9% identical to human RetL1, and 76.8% identical to human RetL1, 34.9% identical to human RetL1 is 34.3% identical to human RetL1, and 76.8% identical to human RetL1, is 43.3% identical to human RetL1, and 76.8% identical to human RetL1, is 43.3% identical to human RetL1 is 34.3% identical to human RetL1 is 34.3% identical to human RetL1 interacts with Ret receptor protein, triggering Ret dimerisation and/or autophosphorylation of the Ret tyrosine kinase domain.

Vectors containing retL3 DNA and prokaryotic or eukaryotic host or land and proteins with a toxin, imageable compound or radionuclide.

Vectors containing retL3 DNA and prokaryotic or eukaryotic host calls transformed or transfected with these vectors are claimed, as well as a method for production of RetL3, its soluble variants and fusion proteins with a toxin, imageable compound or radionuclide.

RetL3, optionally when expressed from vectors in vivo, is used to promote growth of new tissue and survival of damaged tissue, particularly kidney or neural tissue. Typical applications are in renal failure, nephritis, kidney transplants, toxic or hypoxic injury, meurodegeneration, motor neurone disease, mutitly associated with HIV or Creutzfeldt-Jakob disease), cranial nerve or spinal cord injury, developmental discorders such as Down's syndrome system (Lyme disease, muscular dystrophy and myasthenia gravis).

Fision proteins are used to deliver toxins etc. to Ret-expressing
This sequence represents a novel glial cell line-derived neurotrophic factor alpha-3 receptor (GDNF alpha-3). This protein can be used to treat e.g. neurodegenerative diseases (such as Parkinson's Disease, amyotrophic lateral sclerosis (ALS), spinal muscular atrophy (SMA), Huntington's Disease, Alzheimer's Disease, diabetic neuropathy), muscular diseases (including the muscular dystrophies) and nerve and sequence 400 AA;

    vectors, transformed cells and antibodies, used for promoting cell
growth and improving survival of injured cells, especially renal or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New nucleic acid encoding ret receptor ligands and related proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human Ret ligand Retu3.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New factor alpha 3 receptor polypeptide and e.g. DNA and agonists - used to treat neuro degenerative diseases, muscular diseases and nerve and muscle trauma and in diagnostic assays

Claim 4; Fig 2; 22pp; English.

This sequence represents a novel glial cell line-derived neurotrophic factor alpha-3; receptor (GDNF alpha-3). This protein can be used to treat e.g. neurodegenerative diseases (such as Parkinson's Disease, amyotrophic lateral sclerosis (ALS), spinal muscular atrophy (SMA), Huntington's Disease, Alzheimer's Disease, diabetic neuropathy), muscular diseases (including the muscular dystrophies) and nerve and muscle trauma and in diagnostic assays for such conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

single residue. Embodied within repeats 5, 6, 7 and 8 is the consensus sequence for Asp and Asn hydroxylation. The 7th repeat contains the consensus O-gycosylation sequence. CXCXPC.
Immediately following each repeat is a pentapeptide with the consensus sequence XD(I/V)(D/N)E. Fibulin binds to the cytoplasmic domain of the betal subunit of integrin adhesion receptors in a cation dependent, EDTA-reversible manner. It can be used to manipulate adhesion of cells to fibronectin, collagen, with the protein have important diagnostic and therapeutic uses. See also RI1147, RI1149 and RI1150.

Sclaim 10; Fig 4; 56pp; English.

Claim 10; Fig 4; 56pp; English.

The fibulin A, B and C forms are identical from their N-terminals to a divergence point at posn. 566 ( terminal codon in fibulin A)

and 683 residues resp.

All three forms are rich in cysteine (11 %) and 683 residues resp. All three forms are rich in cysteine (11 %)

and analysis wrt no. and spacing of the Cys residues revealed two types of repeat moftif (I and II). The type I motif, CC(X)12c-

C(X)9-10C(X)6CC is repeated twice, separated by an imperfect form of the repeat lacking two Cys residues. The same motif is found in complement components C3a, C4 and C5a; the inverse is found in complement components C3a. The same motif is found in complement components C3a. The same motif is found in complement components C3a. The same motif is found in complement cursor is a 6-Cys pattern repeated nine times, although the type II motif, related to repeats found in epidermal growth the city precursor is a 6-Cys pattern repeated nine times, although the mosensus sequence for Asp and Asn hydroxylation. The 7th repeat consensus sequence for Asp and Asn hydroxylation. The 7th repeat consensus sequence EX(I/V)(D/N)E. Fibulin binds to the cyto.

Immediately following each repeat is a pentapeptide with the consensus of the betal subunit of integrin adhesion receptors in a cation-dependent, EDTA-reversible manner. It can receptors in a cation-dependent, EDTA-reversible manner. It can be used to manipulate adhesion of cells to fibromethic, collagen, laminin, and possibly also other proteins. Antibodies reactive with the protein have important diagnostic and therapeutic uses.

Sequence for an important diagnostic and therapeutic uses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-MAY-1998 (first entry)

Human fibulin type 1 isoform (variant B).

Human fibulin protein; met-OB protein; hypertension; obesity; isoform; type II diabetes; fibrogenesis.

Homo sapiens.

W09738014-A1.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
